

# THASPIKE7W

Spike Solar LED 7W

## INSTALLATION USER MANUAL

### USER MANUAL

Read carefully and follow these instructions. Please keep this manual for a future reference.

### OPERATING INSTRUCTIONS

Do not touch the surface of the solar panel to avoid scratching.

The solar panel must be kept clean to maximize the charger efficiency. If it is dusty, gently wipe with a dry and soft cloth. This solar terminal has been designed for night illumination only. If bright light sources are nearby during the night, the solar terminal could not produce light or produce a tiny light. In order to receive a powerful illumination, you need to charge your solar terminal during a full day under optimal conditions. During winter, remove the snow from the surface because it can prevent the charging process.

Never immerse the solar lamp.

Ip65: Completely prevents foreign objects and dust from entering. Prevents water from entering the electrical appliance from nozzles in all directions and causing damage.

**Note:** The solar station does charge through the sunlight rather than the daylight. Please be aware the clouds could affect the charging power. The solar panel should face no obstacles in the sun (tree, roof ...).

### WARRANTY

Batteries are considered wear parts therefore they are not included in the warranty.

This product is guaranteed for 3 year. Warranty conditions comply with statutory regulations. Subject to technical changes.

If the product is damaged, please contact your seller.

### RECYCLE

If this symbol  appears on the product or packaging it means that the product must not be thrown away with traditional waste. At the end, the device has to be recycled in a sorting centre.

### CAUTION

 Please make the solar light fully charged before use it.

Replaceable (LED only) light source by a professional.
